

## Missing translations

Sometimes words in the website are not translated, I simply missed them when testing

1. Start the "debug" console, `your-website.xx/pws???/w34_module_test.php`
2. The top-row contains all available blocks to test.
3. Select the block with the missing translations and press "Test-it"
4. In the white box below you see all output of the block including the missing translations.
5. Copy them to your `lang_?.txt` file and translate the right part.

## How to add an extra language

First check how it will look when you add an extra language. In easyweather-setup you should select "Your-added-language" in the drop-down. Leave others as is.

Go down to the bottom and press the green "Save . ." button.

Click on "[Back to the main page](#)" and the website will now be in Norwegian.

Choose the default language to display and use..	
Template language to be used as default	Your_added_language
If you selected "Your_added_language" in the dropdown above and if you created/downloaded another language pack set the "locale". This code is used only for "locale" time-strings.	en_EN
AND for "Your_added_language" the name to be used in the menu.	testxx

## Steps to make your own language

6. Rename the `languages/lang_xx.txt` `languages/lang_no.txt`
7. Rename the `languages/lang_extra.txt` `languages/lang_xx.txt`
8. Visit your site and all text will be in English, but the template will be using the translations from the `lang_xx.txt` file

## Start translating

Open the `lang_xx.txt` with a proper script editor. Not with **notepad** or **ms-word**.

You will see the contents which contains two type of lines,

1. comment lines, start with `#` on the first position, leave as is, do not translate
2. all other lines are lines to translate
  - a. They start with a `|`
  - b. Then the "my-English" words or sentence
  - c. Another `|`
  - d. The words to translate
  - e. and another `|`
3. Only translate the rightmost text. Leave the typing errors on the left parts as they are.

Every time you save that `lang_xx.txt` file the template will have more translated words to show.

## TO BE ADDED

1. Adding / removing languages from the menu
2. .
